Patient: Juan Juarez
Type of Injury: Bike
Date of Injury: May 06, 2024
Date of Exam: June 05, 2024

PERSONAL INJURY PHYSICIAN'S PAIN MANAGEMENT AND EVALUATION REPORT

The patient is a 45-year-old male who presents today in our Glendale office for a pain management evaluation in regards to injuries he sustained as a result of an accident that occurred on May 06, 2024.

This is a narrative history of injury and initial chief complaints, as reported by the patient, as well as findings of the initial evaluation, diagnostic impressions, diagnostic studies; and clinical course regarding this case.

HISTORY AND MECHANISM OF INJURY

The patient stated that he was struck by an oncoming vehicle while riding his bike. There was no loss of consciousness. The police and paramedics were summoned to the scene and a report was taken.

Following the accident, he was seen at Olive View Hospital. Upon arrival at the emergency room, diagnostic studies were performed, analgesics were prescribed and he was released.

The patient sought care with a chiropractor and was started on a course of therapy, which he states has been beneficial. Mr. Juarez is now being referred to this office for a medical consultation and further decision making.

CURRENT COMPLAINTS

1. MID BACK
2. LOW BACK

PAST MEDICAL HISTORY

MEDICAL HISTORY / MAJOR ILLNESSES: The patient denies any history of illnesses, including constitutional symptoms, eyes, ears, nose, throat, cardiovascular, respiratory, gastrointestinal, genitourinary, musculoskeletal, neurological, psychiatric, endocrine, hematologic, lymphatic and allergic / immunologic.

PRIOR OR SUBSEQUENT MOTOR VEHICLE ACCIDENTS: The patient denies any subsequent motor vehicle accidents.

PRIOR OR SUBSEQUENT WORK RELATED ACCIDENTS / INJURIES: The patient denies any subsequent work related accidents / injuries.

SURGICAL HISTORY: The patient has undergone left clavicle surgery.

ALLERGIES: Penicillin.

PHYSICAL EXAMINATION

GENERAL: The patient appears his stated age who is in no acute distress. He is alert and oriented times four.

THORACIC SPINE: The musculoskeletal examination of the thoracic spine reveals no postural misalignments or bruising. The paraspinal muscles reveal tenderness bilaterally.

Range of motion testing revealed the following:

Thoracic Spine	Normal	Actual
Flexion	40	40
Extension	0	0
Left Flexion	30	30
Right Flexion	30	30

LUMBAR SPINE: The musculoskeletal examination of the lumbar spine reveals no postural misalignments or bruising. There is radiating pain to the lower extremities, greater on the right. The paraspinal and flank muscles reveal tenderness bilaterally.

Range of motion testing revealed the following:

Lumbar Spine	Normal	Actual
Flexion	60	40
Extension	25	20
Right Lateral Flexion	25	20
Left Lateral Flexion	25	20

Extension loading test is positive bilaterally.

Straight leg raising test is positive on the right at 60 degrees and on the left at 50 degrees.

Neurological testing revealed the following.

Babinski Sign	Negative	Negative	Negative
Clonus	Absent	Absent	Absent
Motor	Right	Left	Normal
Hip Flexor L1, L2	5	5	5
Knee Extensor L3, L4	5	5	5
Ankle Dorsiflexion L5	5	5	5
Plantar Flexion S1	5	5	5
Extensor Hallucis L5	5	5	5
Sensory	Right	Left	Normal
Anterior thigh L3	Intact	Intact	Intact
Knee L4	Intact	Intact	Intact
Lateral Leg L5	Intact	Intact	Intact
Medial Leg L4	Intact	Intact	Intact
Lateral Foot S1	Intact	Intact	Intact
First Web Space L5	Intact	Intact	Intact
Heel and Plantar	Intact	Intact	Intact

DIAGNOSIS

1. S23.3XXA - Thoracic spine musculoligamentous sprain.
2. S33.5XXA - Lumbar spine musculoligamentous sprain.
3. M54.16 - Lumbar spine radiculopathy.

DISCUSSION

Based on the patient's clinical presentation and findings, I am recommending the following treatment options:

The patient may do therapy as needed in conjunction with home exercise. He may do daily walks, yoga and apply ice.

I recommend an MRI study of the lumbar spine be taken to rule out disc protrusions / tears.

The patient was invited to return to this office following the MRI for a reevaluation, to review the study and further decision making. If there are any problems, the patient will call me or return before that time.

His prognosis is guarded at this time.

Respectfully,
